## How to update poetry packages?

1. Update the package inside the docker and commit the pyproject.toml and poetry.lock to the repository

```
docker exec -it fleet_manager/<some repo> bash
poetry update <package_name>
```

2. If the poetry update was successful

```
docker cp fleet_manager:/app/pyproject.toml <fleet_manager_repo>
docker cp fleet_manager:/app/poetry.lock <fleet_manager_repo>
```

3. Commit the changes done on pyproject.toml,poetry.lock to the repository.
4. Base images have to be created once the packages are updated
